<u>National Wetlands Inventory</u>	The Emergency Wetlands Resources Act of 1986 (P.L. 99-645, as amended) required the Secretary of the Interior, through the Director of the Fish and Wildlife Service, to map and digitize wetlands of the U.S. and to archive and distribute the data. It further requires the Secretary to produce national wetlands status and trends reports to Congress. The Clean Water Act authorized for wetlands mapping to provide information to States to assist in the development and operation of programs under the Act. The Fish and Wildlife Coordination Act authorized the Secretary to provide assistance to, and cooperate with Federal, State, and public or private agencies and organizations in the protection of all species of wildlife and their habitats and to make surveys of lands and waters of the U.S. and to accept funds for purposes covered in the Act. The Office of Management and Budget Circular A-16 required the Department, through the FWS, to coordinate the Wetlands Layer of the National Spatial Data Infrastructure under the coordination of the Federal Geographic Data Committee (FGDC). Other OMB Circulars also apply. The FWS is responsible for producing and maintaining the Wetlands Layer of the National Spatial Data Infrastructure (NSDI), which is a major component of the Department of Interior's geospatial line of business portfolio and E-government, and identified as a National Geospatial Data Asset (NGDA) by the FGDC on GeoPlatform.gov and Data.gov.	8-Jun-05	Staff

The Regional Implementation Oversight Group (RIOG) has been established to provide a high-level policy forum for discussion and coordination of the implementation of the CRS and related BiOps. The RIOG is a forum for interagency coordination and does not supplant existing federal, state, or tribal decision-making authorities. All decisions under the authority of the federal government will continue to be made by the appropriate federal agency with the statutory authority to make such decisions.</p> <p>The TMT's mission is to ensure broad technical participation and use of the best available technical information, and to encourage regional consensus on technical recommendations regarding operations of the CRS. The focus of the TMT is to assure CRS operations specified in the NMFS and USFWS BiOps are implemented while considering the provisions of (and effects on) the Northwest Power and Conservation Council's (NPCC) Fish and Wildlife Program, other BiOps, State and Tribal plans and programs, and other relevant operational requirements. Specifically, the TMT should explore operational scenarios under the BiOps that would serve to protect other fish and wildlife in the Columbia River Basin and promote coordination and consistency with these other objectives to the extent possible.</p>
